Friday, September 6, 2008 So happy to be home Here we are in Paris after a four hour ride. We were met by a shuttle service on our arrival at Charles de Gaulle airport. It was an easy and pleasant experience. The shuttle took us from the check-in desk to the terminal then to the terminal to the parking garage where the shuttle dropped us off. The present invention relates to a disk drive, and more particularly, to a disk drive which reads data from and writes data to a disk and determines whether a data read operation and a data write operation are completed. There are a variety of disk drives used in office automation equipment, personal computers, and the like. As the disk capacity increases, it is becoming more common to use the PCMCIA (Personal Computer Memory Card International Association) format. An example of a disk drive used in a PCMCIA format is a PC Card. In a PC Card, a computer BIOS (Basic Input/Output System) controls the functions of the disk drive. The PC Card employs a contact type connector which can be inserted into a slot on the computer motherboard. In a conventional disk drive, data is sequentially read from and written to the disk, so it is necessary to provide a mechanism which can determine whether a read operation or a write operation has completed. One example of this is a magnetic disk drive disclosed in Japanese Laid-Open Patent Publication No. 58-154065. In this magnetic disk drive, a read head reads data from a magnetic disk while the head floats above the disk by a predetermined height, then the head moves to a predetermined position 82157476af
